Ordering is easy. Just follow these 4 simple steps.

1

Select your image, scanning & printing services.

2

Complete the order form & send us your pictures.

3

Confirm your order when we contact you.

4

Enjoy your amazing new pictures!

Want to turn your artistic creations into Limited Edition fine art?

We can photograph your artwork either digitally or on traditional transparency film and create archival, museum quality fine art prints in any quantity, from just one to 100 or more.

Need more later?

Once we have created your file, you can re-print your art again and again, with certainty that the prints will always match.

## image | services

In order to provide a realistic quote, it's important for us to know both what you'd like to achieve and the condition of the images involved. By sending us your images, you allow us to accurately evaluate and estimate the steps necessary to achieve your desired results.

Once we receive your order form and review your images, we will contact you to confirm your order and answer any questions you may have.

**There is no obligation for this service. If you decide not to proceed, we will return your images at no cost.**

When you decide to proceed, we will e-mail you a detailed estimate. We will begin work on your order and bill you only after we receive your confirmation and acceptance of our estimate.

### Evaluating Slides and Negatives

Before scanning a slide or negative, it is often difficult to determine the level of work required to turn it into a work of art. The cleanliness, grain, color balance and exposure may not be fully apparent until after the image has been scanned (especially with color negatives). Upon receipt of your originals, we may need to perform a preliminary scan in order to provide a more accurate estimate. You will be billed for these scans only if you accept our estimate and they are used as a normal part of preparing your output. This is another example of why having the actual images to evaluate is an important part of creating an accurate estimate.

All work is subject to the Terms and Conditions of ShutterSharp.  
By submitting your order you signify your acceptance of these terms and conditions.

## image services | pricing

All image work is based on an hourly rate of **\$50** per hour.

The minimum charge per order is **\$50** (1 hour).

After the first hour, charges are based on half hour increments of **\$25**.

To ensure your prints reflect all the visual dynamics and detail your pictures have to offer, we recommend a minimum **Basic Enhancement** adjustment to **any** image prior to printing. It's often all it takes to turn an average image into a great one.

Based on typical images, one hour of editing would allow sufficient time to enhance and correct approximately three images.

If you choose to have your finished images printed elsewhere, we will supply a DVD of your image file and an 8" x 10" reference print for **\$25** per image.  
This assures you have a visual standard of how your image should look when printed.

Complete the order form & send us your pictures.

3

Confirm your order when we contact you.

4

Enjoy your amazing new pictures!

Scans produced by ShutterSharp will be retained for a minimum of 60 days to ensure your receipt of the order and allow ordering of copies.

If directed, we will remove your files from our computers earlier. We will be happy to archive your art or photographic files for later reprinting if you desire.

## scanning | services working and archival scans

### working scans

The first step in creating a new image from non-digital prints or other artwork is to capture a digitized version as the basis for the new art.

We call these "Working Scans".

**Working Scans** are provided at **\$10 per capture**, are not returned with the order and are only created at the resolution required for the final artwork.

### archival scans

**Archival Scans** are intended to provide a permanent, high resolution digital record of any image that can be photographed or scanned. Favorite photos, artwork, letters or visual inventories for insurance purposes can all be saved non-destructively for future generations.

All files are returned on high quality DVDs in 16 bit tiff format unless otherwise requested. Archival Gold DVDs are available on request (see prices below).

NOTE: All scans are subject to the limitations listed below.

Slides and negatives submitted for "scanning only" will have dust removed but no further editing or cleaning. Glass mounted transparencies are NOT accepted. Transparency and negative scans will also be returned in FFF format at no additional charge. FFF is a propriety Hasselblad format equivalent to a RAW camera image. Information on, and the software necessary to open, edit or use files in FFF format is available at:

[www.hasselblad.com](http://www.hasselblad.com).

**Flatbed Scans** (for print originals) are created as 16 bit tiff files with a Dmax of 3.6 and a resolution of up to 1600 optical dpi (dots per inch). Originals of up to 12" x 17" can be accommodated. File size will be limited to 250GB.

Larger work can be photographed digitally or on transparency film and then scanned - contact us for more information and prices.

**Negatives and Slides** (up to 4" x 5") are scanned with a Dmax of 4.9.

**4" x 5"** originals are scanned at 2040 dpi, yielding a 16 bit tiff file of approximately 400mb.

**120 film** is scanned at 3200 dpi, yielding a 16 bit tiff file of approximately 350mb (6 x 7).

**35 mm** is scanned at 8000 dpi, yielding a 16 bit tiff file of approximately 480mb (35mm slides must be removed from their mounts to be scanned at 8000 dpi. Mounted 35mm slides are scanned at 5000 dpi, yielding a 16 bit tiff file of approximately 170mb).

NOTE: Other size negatives & slides smaller than 4" x 5" can be accommodated - contact us for more information and prices.

## scanning services | pricing

### What is Dmax?

A measure of the darkest shadow that can be scanned and will still show visible detail. The higher the Dmax of a particular scanner, the wider the range of tones the scanner can capture. In the past, a Dmax value of 4.0 was considered to be perfect.
